## Gship – Transporter App

Transporter Operations, Shipment Movement & Delivery Management

### 1. Problem Statement

Transporters need a structured digital system to receive logistics assignments, manage pickup and delivery activities, update shipment progress and report operational exceptions across the GramUnnati logistics network.

### 2. Our Solution

Gship provides transporters with a mobile application to manage assigned shipments, accept logistics tasks, perform pickup and delivery operations, update order statuses, report damage or exceptions, and coordinate with GHub.

### 3. Project Overview

Gship is the transporter-side mobile application within the GramUnnati logistics ecosystem. It connects transporters with GHub to manage shipment movement between pickup locations, the hub, SHG points and delivery destinations.

### 4. Goals

#### Transporters

- Receive and manage assigned shipment tasks.
- Accept and execute pickup, hub-transfer and delivery activities.
- Update shipment status throughout the transportation workflow.
- Report damage, exceptions and return-related activities when required.

#### GramUnnati Logistics

- Connect transporters with the centralized GHub order management system.
- Provide visibility into shipment movement and transporter activity.
- Coordinate transportation between SHGs, the hub and delivery-side operations.

## 5. Vision

To provide a reliable digital transportation workflow that connects transporters with GHub and enables transparent movement of GramUnnati orders from pickup through hub and delivery operations.

## 6. Our Values

- Empowerment: Enable transporters to manage logistics work digitally.
- Self-Reliance: Support organized and trackable transportation operations.
- Transparency: Maintain clear assignment and shipment-status visibility.
- Technology for Good: Make transportation workflows simple and accessible.
- Community Prosperity: Strengthen the rural logistics network through coordinated transport.
- Sustainability: Improve coordination and reduce unnecessary operational movement.

## 7. What the System Does

| Area                         | Purpose                                                                                             |
|------------------------------|-----------------------------------------------------------------------------------------------------|
| Registration & Profile       | Allows transporters to register, maintain their profile and manage relevant account information.    |
| Transporter Assignment       | Displays shipments assigned to the transporter and the actions required for the task.               |
| Pickup From SHG              | Supports transporter pickup activities from the assigned SHG and updates the shipment workflow.     |
| Hub Movement                 | Supports movement of parcels toward the GHub warehouse and related status updates.                  |
| Delivery Workflow            | Supports delivery-side transportation activities and shipment status updates.                       |
| Damage & Exception Reporting | Allows operational issues such as parcel damage or exceptions to be reported during transportation. |
| Return Workflow              | Supports transporter activities for return shipments and reverse movement.                          |
| Notifications                | Provides relevant assignment and operational updates to the transporter.                            |

## 8. Platform Ecosystem

- Buyer/Seller Apps – Create and manage the underlying commerce orders.
- GHub – Central logistics hub for order assignment and operational management.
- GShip – SHG-side mobile application for assigned delivery operations.
- Gship – Transporter-side mobile application for transportation activities.
